

## International domains

GTLD (Generic Top Level Domain) or international domains can be registered by domestic and foreign legal and natural persons, and one person can register more than one domain. GTLD domains are registered for the period from 1 to 10 years. Registration of international domains does not require any accompanying documentation. The process of registration of international domain is very short, and it is usually 24-48 after payment.

If you decide to register a generic TLD domain, the first thing you should do is to check whether the domain is free.

It is important to note that generic TLD domain name can be a sign series of up to 67 characters. Domain names use a subset of Latin-1 (USA) set of characters, and that: letters (A-Z), numbers (0-9) and hyphen (-). Domain name must not begin or end with hyphen (-). Small and capital letters are, according to the standards, completely equal. A domain is hired for a period of one to ten years.

We can register more types of GTLD domains for you:

- .com (commercial) is the Generic Top Level Domain (GTLD). It is one of the first Internet domains used on the Internet, created in January 1985, and it has grown in the domain with the highest use on the Internet of all TLD domains. It was firstly administered by the United States Department of Defense. Because of its domain registration price, which is \$ 10-15 now (primarily the price was \$ 50), it actually achieved the greatest popularity. Currently, VeriSign performs domain administration. Registration of .com domain is possible for all without any restrictions. There are currently over 75 million registered .com domains.
- .net (network) is the Generic Top Level Domain (GTLD). Domain .net is administered by VeriSign. Domain .net is one of the first top-level domains, created in January 1985. It was primarily intended for the use of companies that are network-oriented such as Internet service providers. Currently, there are no restrictions during the registration of .net domain, so the domain can be registered by anyone. It is often treated as a second .com domain. There are currently over 10 million registered .net domains.
- .org (organization) is the Generic Top Level Domain (GTLD). Domain .org is one of the first top-level domains, created in January 1985, primarily intended for organizations that did not find their requests in other GTLD domains. Now, anyone can register .org domain. It was primarily intended for personal use. Its alternatives are domains .name and .info. Domain .org is possible to register publicly without any restrictions since 1 January 2003.
- .info (.information) is the Generic Top Level Domain (GTLD), whose basis is application on the informative web sites. Registration is possible for all, without any restrictions. As a domain, it is developed from the 1980s, but it has come in use in 2000 as one of seven new GTLD domains.
- .biz (business) is the Generic Top Level Domain (GTLD), intended for business web sites. The domain was created in 2001 on the basis of existing interest and related trends in the development of the Internet during the 1990s. The domain administers Neulevel.
- .eu is the highest Internet state codes domain (ccTLD) for the European Union (despite the fact that the EU is not the state). Registration for the trademark bearers started on 5 December 2005 and ended on 7 April 2006 when the registration of .eu domains officially started by the legal and natural persons in the European Union. Currently, besides it, there is .eu.int in official use.
- .fm is the highest Internet state codes domain (ccTLD) for the Federation of State of Micronesia, a country in Oceania. Here, .fm domain is in common use for radio stations.
- .tv is the highest Internet state codes domain (ccTLD) for Tuvalu. Here, .tv domain is in common use for the TV stations or programs.
- .mobi (also known as DotMobi) is a top-level domain approved by ICANN. The domain is administered by mTLD global registry dedicated to Internet domain award with mobile devices via mobile network. It is financially supported by Google, Microsoft, Nokia, Samsung, Ericsson, Vodafone, T-Mobile, Telefónica Móviles, Telecom Italia Mobile, Orange, Telecom, the GSM Association, Hutchison Whampoa, Syniverse Technologies, and VISA. DotMobi domain is available for the registration since 26 September 2006.
- .name is the Generic Top Level Domain (GTLD), whose basic use is for the presentation of individual real names, nicknames, pseudonyms and other personal names. It was assigned by the Global Name Registry in 2001, while it came in use in January 2002.
- .travel is a Top Level Domain, approved by ICANN on 8 April 2005. The domain, during its registration, has a few restrictions. The domain can be registered by tourist agencies, tour operators, tourist organizations, tourism-oriented catering institutions... The general sponsor of .travel domains is Tralliance Corporation, the owner of TheGlobe.com. The official start of use of .travel domains was in October 2005, while the registration is available since January 2006. Domain registration price is from 800.00 RSD and up, depending on the type of domain. For more information, visit the page Domain registration price. Besides the registration of domains, we are often encountered with the transfer of them. Transfer of domains is the transfer of jurisdiction for a domain from one register to another register. Transfer of domains lasts between 5 and 15 days. Transfer of domains includes the extension for next year.
