

Hosting packages

If the choice of hosting providers depends only on the cost, at the occurrence of the very first problem, you will understand that you actually paid an expensive cost. We are not the cheapest, which is not our goal anyway, because we do not want our quality to be underprice. Just imagine a situation where, for a whole day, you cannot send an urgent order to your provider for goods that should be even more urgently delivered, and you cannot send even an offer since mails do not function. All this is just because you were attracted by "the best price" on the market. Our goal is to provide for you a high-quality service at price that will not burden you. Our satisfied customers are the best confirmation that we have succeeded in it.

If we are not yet well known, we will, in short, try to give you closer what makes us different from others:

- The possibility of testing our servers for all new users in the period of 15 days
- For each subscription for a period of 24 months, you receive 6 months free (Action 1 +1 = 2,5)
- Technical support 0-24, 7 / 365. All our operators are actually available on the phones because we do not want to allow your potential problem remains unresolved for a long time
- Our technical staff has already been in the hosting business for already a few years, so there is no surprise for us.

We regularly develop and upgrade the technical equipment in order that our service with its quality and reliability may overtop your expectations.

options / Package		Server resources of Linux hosting package						General	
50	100	200	500	1000	2000	Space on the server (MB)	Monthly bandwidth (MB)	Number of independent sites
