

About Data Center

WebPortal™ Group servers are located in the USA, in the Equinix IBX ® data center, one of the largest Internet data centers with several thousand servers. We have chosen this country for several reasons, because it is them who offer us the reliability, quality, favorable price, good speed, protection and all that is necessary to a business user which cannot be got in our country, and usually the main problem is poor infrastructure. In order to ensure the servers entirely, they are deployed in two locations in the United States. Equinix is the best example of a company which puts the user in the first place and is a leader in the market. The companies from which hardware and software are provided are Cisco, Dell, RedHat, Microsoft, VMware and many others...

Serves configurations are based on Dell PowerEDGE 2950 servers with 4 GB of RAM, a Linux CentOS operating system connected in a cluster and VPN solutions! CPU subsystem is based on the Intel Quad-Core 3210 Xeon (Kentfield), and discs are on the RAID10 configuration.

Security

With web hosting packages, comes an AntiSPAM and AntiVirus protection, and our servers are protected by external firewall systems that are based on CISCO and Juniper technologies allowing an impeccable protection of web site.

Availability

Our servers have a constant power supply. Power supplies and aggregates are, on the electrical network, connected by two HEP power rings. In addition, temperature and air humidity are controlled in the data center.

All the above gives us the opportunity to guarantee our users 99.9% uptime About EQUINIX: Corporate Review Equinix is the leading hosting service provider that offers the first-class collocations, traffic exchange and acquired IT infrastructure solutions. Global enterprises, content companies, systems for integration and network service providers rely on Equinix Internet Business Exchange ™ (IBX ®) centers for network differences that offer reliability on the world level. Equinix IBX centers serve as critical, pithily center for IP networks and Internet operations worldwide. With IBX centers, which are located in 18 strategic markets across North America, Europe and Asia-Pacific, Equinix enables customers to reliably perform operations by their critical mission infrastructure in general basis.
